Walt Crawford
Ohio State University
May 2004

Watch the Notes

- This is a short version of the actual seminar
- Most slides rely on notes to make sense
- In the seminar itself, almost all slides are purely screen illustrations
- I'm not posting the full 140-slide set because it's too large, would make no sense without narration, and I don't have permission from the 20 institutions involved (except to show the presentation at OSU). This brief version includes the gist of the discussion.

Descript'n	1 sheet ([1] p.) : ill
Series	Early English books, 1641-1700 ; 1821:22
Note	Reproduction of the original at the British Library Wing (2nd ed.) W3362

OpenURL Beyond Text

- Technically, OpenURL 0.1 only supports articles, journals, chapters, and books
- In practice, however, OpenURL works for nonprint items—as long as the resolver doesn't insist on standard numbers.
- Consider the slides that follow: an audiocassette record and link.

Title **Byting into video [sound recording] : DVD and networked delivery : ACRL**

Publish info [Chicago, Ill.] : American Library Association : [Distributed by Teach'em, 2000]

- 1 OhioLINK library has this item
- [REQUEST THIS ITEM](#)

Descript'n 2 sound cassettes : analog

Note A program co-sponsored by the Association of College & Research Libraries Media Resources Committee and the ALA **Video** Round Table

Performers Moderator: Mary S. Konkeli; speakers: Walt **Crawford**, Karen C. Lund, Judy Napier, Claire Dougherty

Note A session recorded at the 110th annual conference of the American Library Association

Variations on a Theme

- Trigger images can be generic (SFX), generic with institutional ID, or explicit—and explicit images can be limiting (“get articles”). A number of institutions use our default, “Availability.”
- Resolver screens can be the provider’s default, but most these days show the institution.
- Offerings beyond full text can vary from minimalist (or none!) to more than a dozen possibilities.

Some Service Options

- Books: ISBN gets the edition, title offers more flexibility; some resolvers offer both.
- No standard number: Just title, or title and author, or something else?
- Google searches: Article title, Author, or something else? Those two are most common.
- OAI Harvester searches: A great way to add new forms of full text at no additional cost.
- Catalogs with title browse when there's no result improve OpenURL retrieval

Still More Services

- Fairly common: Populating an ILL form
- Abstracts and author searches in special sources
- We'll see new ideas in the future.
- OpenURL 1.0 adds new service possibilities: Requester information can be provided, and the OpenURL can request a specific service when several are available.

Variety of Full Text

- One great strength of OpenURL: Many full-text resources for one focused indexing database.
- One result set for one anthropology search, looking at the first 23 records, at one institution, included text from:
- Free e-journals, Catchword, Metapress, Swetsnet, Academic Search Premier, EBSCO Health Source Nursing, Ingenta, Synergy, Lexis-Nexis, OCLC Contemporary Womens Issues, Cambridge University Press, Factiva, Proquest ABI/Inform, OCLC Wilson Select Plus, Project Muse, and local print: 16 in all

Other Issues

- The knowledgebase is key—linking journals to full-text resources and providing ISSNs from titles
- How do you handle multiple hits? Which gets preference?
- Do you offer advice for specific full-text resources (particularly those that won't link directly to an article)?
- How much feedback do you put on the screen?
- Some resolvers are “serials-centric”; that can be a problem

Quick Recap

- OpenURL makes your resources work better together
- There are as many variations on OpenURL as there are users
- Bright ideas—such as using OAIster to add full text—will continue to make OpenURL better.
